

Prices picking up again, as supply continues to lag

Nationally, prices starting to pick up again...

The recent data on residential property prices show that after some moderation in the opening months of the year, prices have resumed their upward trajectory. Nationally prices increased by 0.6% in April, with the year-on-year rate now at 15.8%. The renewal of upward pressure on prices was expected as the weakness in Jan/Feb mainly reflected temporary factors, such as seasonal issues and uncertainty in relation to the Central Bank's new rules on mortgage lending.

In terms of the regional picture, the recovery is still being led by Dublin, although the pace of increases here has slowed slightly, with prices up by 20% on a year-on-year basis in April compared to growth rates of 22-25% in the last six months of 2014. Dublin prices are now around 45% off their lows.

Outside of Dublin, the pace of price increases has generally been on an upward path since the second half of 2014 and this trend has continued, with the figures for April showing yearly growth accelerating to 11.4%. This represents its strongest rate of increase since mid-2007. Prices outside of Dublin are up 14.2% from their trough.

...as supply continues to undershoot demand...

The housing market continues to be characterised by the mismatch between demand and supply. On the demand side, housing demand models suggest that the economy needs to be building around 25,000 residential units per annum based on underlying Irish population demographics, including household formation dynamics.

On the supply side, there is still a considerable shortfall in housing output. This is highlighted in the housing completions data. Last year, completions totalled 11,000 units in 2014, an increase of 33% versus 2013 levels, but still well short of the required amount (i.e. 25,000 units). The shortfall in housing supply is also reflected in the Daft data on sales and rental stock. The number of residential units for sale at the end of the first quarter was 16% lower compared to Q1'14. Likewise, rental stock also continues to fall, down around 40% in April compared to a year earlier. Against this backdrop, rents are continuing to rise sharply, up 8-9% on year-on-year basis in recent months and are now just 3% off their pre-recessionary peak.

More recent data suggests that the recovery in house building activity is continuing. In the three months to March, completions were at around 2,600 units, an increase of 26% on the same period last year. If this run rate is maintained, completions could total in the region of 14,000-15,000 units this year. Leading indicators of activity show some signs of a further acceleration in residential construction. The housing component of the construction PMI has rebounded, and is now back at levels consistent with a strong pick-up in building (i.e. above 60), after its 'slower' readings in the early part of the year. Meantime, very robust planning permissions data for Q1 provide further encouraging signs on future activity in the residential sector. Meanwhile, new housing registrations, which refer to developer activity, were up by 96% in the first five months of 2015. However, despite these positive signs, it will still be an number of years before house-building is at levels required to meet demand.

...low levels of supply also impacting the mortgage market

Data on the mortgage market show that activity in the sector remains on an improving trajectory, although, the size of the market remains some way from a 'normal' market. Mortgage drawdowns increased by 64% on a year-on-year basis in volume terms in Q1, while in value terms, an increase of 73% y/y was recorded. Meanwhile, recent figures on the level of mortgage approvals show some slowing in the rate of growth, which may in part be due to the new Central Bank criteria on mortgage lending. Going forward, the continued shortage in residential units will remain an impediment to transaction levels and in turn, the scope of growth for the size of the mortgage market, which may also be impacted by the new Central Bank mortgage regulations.
