

# The Irish Economic Update:

*Continuing good growth, but  
challenges remain*

March 2020

Oliver Mangan  
Chief Economist  
AIB

# Strong growth by Irish economy over 2013-2019

- Very severe recession in Ireland in 2008-2009. GDP fell by 8.5% and GNP down 11%
- Collapse in construction activity and banking system, severe fiscal tightening, high unemployment. Ireland entered a 3 year EU/IMF assistance programme from 2010-2013
- GDP at end of 2008-09 recession was still over 25% higher than in 2001, highlighting that the economic crash came after a long period of very strong growth going back to 1993
- Ireland tackled its problems aggressively in the public finances, banking sector and property market. Imbalances in economy unwound – housing, debt levels, competitiveness, BoP
- Focused on generating growth via its large export base and FDI as the route to recovery
- Domestic economy has recovered strongly, led by rebound in investment and retail spending
- Strong jobs growth. Unemployment rate fell from 16% in early 2012 to below 5% in H2 2019
- Budget deficit eliminated at a quicker than expected pace. Public finances now in surplus
- Major deleveraging by private sector, including households, in past decade
- Balance of payments in surplus

# Some better survey data recently

## AIB Irish Mfg and Services PMIs

## Consumer Confidence (ESRI - KBC)

## Retail Sales (ex-autos) - Volume, YoY, %

## Modified Final Domestic Demand and Employment

# Real indicators held up well in 2019

- Robust jobs growth of 2.9% yoy in 2019, matching rates seen in previous years
- Downtrend in unemployment rate continues, as it drops to 4.7% in Q4 2019
- Housing completions up strong 18% yoy to over 21k in 2019, though slower growth than in 2018
- Rising housing commencements – up 25% yoy to Sept 2019, close to robust 2018 growth rate
- Mortgage lending growth slowed to 9.5% yoy in 2019 – flattening house prices a factor
- Construction PMI weakened notably in 2019. At level consistent with only modest pace of activity in Jan
- Retail sales (ex-motor trade) rose strongly again last year, increasing by 4.3%
- Total car registrations (new + 2nd hand imports) dip at start of 2020 after strong performance in 2019
- Manufacturing PMI weakened markedly during 2019. Picked up in first month of 2020
- Services PMI slipped in 2019, but rebounded strongly over winter and hit a 7-month high in January
- Consumer confidence fell sharply to 6 year lows in 2019 as Brexit fears weighed, but now trending higher
- Budget surplus rose to €1.4bn or 0.4% of GDP in 2019. Tax receipts up by strong 10% yoy in January 2020

# Jobs growth still strong, unemployment rate below 5%

Year Average	2016	2017	2018	2019	2020(f)	2021(f)
<b>Unemployment Rate %</b>	8.4	6.8	5.8	5.0	4.6	4.5
<b>Labour Force Growth %</b>	1.9	1.1	1.8	2.0	1.8	1.8
<b>Employment Growth %</b>	3.7	2.9	2.9	2.9	2.2	1.9
<b>Net Migration : Year to April ('000)</b>	16.2	19.8	34.0	34.0	35.0	35.0

Source: CSO and AIB ERU forecasts

# Large Irish export base performing very well

- Ireland a very open economy – exports, driven by enormous FDI, equate to well over 100% of GDP
- Major gains in Irish competitiveness earlier in decade – though wage growth now picking up
- Exports rise strongly, helped by large FDI inflows
- Total exports up by 10.4% in 2018, with a further strong rise of 12% yoy in Q1-Q3 2019

# FDI and the Irish economy

## WHAT ATTRACTS FDI TO IRELAND?

- Access to European markets
- Low corporate tax rate of 12.5%
- English speaking country
- Well educated, flexible workforce
- Common law legal system
- Stable political framework
- Long history of successful FDI
- Access to decision makers

## KEY FDI IMPACTS ON THE IRISH ECONOMY

- 1,550 multinational companies now in Ireland
- 33% of MNCs have been here for more than 20 years
- 63% of new MNCs came from US in 2019. Share falling
- €129bn in FDI Exports (68% of total exports)
- 245,000 Jobs in FDI firms (10.5% of total emp.)
- Ten MNCs account for 50% of Corporation Tax
- €14bn Spending on Irish services/materials/capex
- €13.3bn in Payroll

## WORLD LEADERS CHOOSE IRELAND

- 17 of the top 20 in ICT
- 10 of the top 10 in Pharmaceuticals
- 14 of the top 15 in Medical Devices
- 8 of the top 10 Industrial Automation
- 10 of the 'top born on the Internet' firms
- 20 of the top 25 Financial Services firms
- UK now less attractive for FDI owing to Brexit

## US TAX CHANGES HAVE NOT HIT FDI

- US firms have well established operations here
- Need highly skilled, multi-lingual workforce
- Firms do not move to Ireland to avoid US tax
- Ireland is base to service their European markets
- Easier to operate in local rather than US time zone
- Still wide gap between US & Irish corporate tax rates
- Very strong FDI inflows in both 2018 and 2019

# Domestic economy has rebounded strongly

- Construction sees strong recovery since 2013. Output up nearly 12% on average in 2016-18 period
- Slowdown in non-residential construction activity last year – construction output up 4% yoy in Q1-Q3 2019
- Business investment (ex aircraft/intangibles) has picked up strongly since 2013
- However, Brexit uncertainty saw decline in business investment in 2019
- Consumer spending grew by 3.5% on average over 2014-2018 period. Up by 3.4% yoy in Q1-Q3 2019
- Core retail sales rose by a strong 4.3% in 2019
- Total car regs (new + used imports) remained at high levels in 2019, though dip at start of 2020
- Modified final domestic demand grew at 4.4% rate in 2014-2018 period. Up 3.5% yoy in Q3 2019

## Construction Output

Source: CSO via Refinitiv

## Consumer Spending

(Volume, 3 Qtr Moving Average, YoY% Change)

Source: CSO via Refinitiv

# House building on the rise, but still at quite a low level

- Housing completions up 18% yoy to over 21,000 units in 2019, a slight moderation on 2018's 25% growth rate
- Housing commencements rose 25% yoy to end Q3 2019 following a 28% increase in 2018
- Planning permissions up 23% yoy in Q1-Q3 2019, with 12 month running total now above 34,000
- Measures put in place to boost new house building. More NAMA activity, apartment planning rules relaxed
- Housing output still running well below annual new housing demand, estimated at 35,000 units
- Completions forecast at circa 24,500 in 2020, rising to around 28,000 in 2021
- Mortgage lending growth eases to 9.5% in 2019, though mortgage approvals did pick up over the year
- Affordability broadly stable as earnings growth offsets modest increase in house prices

# House price inflation slows sharply

- House prices declined by a very sharp 55% between their peak in late 2007 and early 2013
- House prices have since rebounded as big housing shortage emerged after 90% fall in home building
- Prices up 84% by Dec 2019 from low in March 2013 – Dublin prices up by 93%, non-Dublin rise 83%
- But house prices still some 18% below 2007 peak
- House price inflation slows sharply in 2018/19 reflecting Central Bank rules
- Prices up 2.5% yoy nationally in 2019. Eased to 0.9% by December, down from high of 13.3% in April 2018
- Dublin prices fell 0.9% yoy in Dec, down from +13% in Apr '18; non-Dublin slows to 2.8% from 15% last year
- CSO rental inflation moderating. Index dipped for first time since 2012 in Jan. Flat in Nov/Dec

# AIB Model of Estimated Housing Demand

- Rising headship rates added circa 8,000 per year to housing demand in 2002-2011 period
- Shortage of housing, high rents, tighter lending rules saw average household size rise in 2011-16. Thus, headship fell – was a drag of circa 10,000 p.a. on housing demand
- Assume no change in headship in 2016-2020 – note long-term trend is upwards, adding to demand
- Pent-up demand has also built up in recent years from lack of supply
- Thus, forecast table may be under-estimating actual real level of housing demand
- Shortfall in supply met from run down of vacant stock and demand being reduced by fall in headship rate. Both factors very evident in 2011-16 and most likely in 2016-20

Calendar Year	2016	2017	2018	2019	2020
<b>Household Formation</b>	26,500	26,500	26,500	27,500	27,500
<i>of which</i>					
<b>Indigenous Population Growth</b>	18,000	18,500	17,500	16,500	14,500
<b>Migration Flows</b>	8,500	9,500	12,000	13,000	13,000
<b>Headship Change*</b>	0	0	0	0	0
<b>Second Homes</b>	500	500	500	500	500
<b>Replacement of Obsolete Units</b>	5,000	5,000	5,000	5,000	5,000
<b>Estimated Demand</b>	<b>32,000</b>	<b>33,500</b>	<b>35,000</b>	<b>35,000</b>	<b>33,000</b>
<b>Completions</b>	<b>9,900</b>	<b>14,400</b>	<b>18,100</b>	<b>21,250</b>	<b>24,500</b>
<b>Shortfall in Supply</b>	<b>-22,100</b>	<b>-19,100</b>	<b>-16,900</b>	<b>-13,750</b>	<b>-8,500</b>

\*Headship is % of population that are heads of households.

Sources: CSO, DoECLG, AIB ERU

# Govt debt ratios fall, private sector deleverages

# Government finances return to surplus in 2018/19

- Budget deficit declined sharply over last decade, with small €170m surplus recorded in 2018
- Public finances were ahead of target last year – strong tax receipts, rose by 6.8% yoy in 2019
- Budget surplus exceeded target. Rose to €1.4bn or 0.4% of GDP in 2019
- Primary budget surplus (i.e. excluding debt interest) of near 2% of GDP in 2019
- Debt interest costs very low – at 1.4% of GDP
- Budget surplus expected to rise further in 2020
- Tax receipts up by 10% yoy in January, aided by strong income tax take
- Gov Debt/GDP ratio has fallen sharply
- Irish bonds yields negative out to 10 years
- Sovereign debt ratings upgraded in recent years; S&P at AA-, Fitch at A+, Moody's A2 for Ireland

# Brexit: Difficult trade talks lie ahead in 2020

- EU and UK agreed on revised Brexit deal at last October's Heads of State Summit
- NI to remain within Single Market for goods and have dual EU-UK customs system
- UK left the EU on Jan 31<sup>st</sup> 2020 in orderly exit. Transition period to last until end 2020
- UK government rules out extending transition period beyond this date
- Thus, EU-UK talks on future trade relationship will need to be completed by end 2020
- Negotiations likely to prove difficult and fractious. Challenge to be done by end 2020
- EU insisting on level playing field, with considerable regulatory alignment
- UK government puts focus on 'taking back control' and non-alignment with EU
- Much uncertainty about outcome of talks, which will determine final shape of Brexit
- UK could opt for no deal rather than have close alignment with EU rules under a FTA
- However, some type of FTA seems likely as it's the best outcome for both the UK and EU

# Key points about any EU-UK Free Trade Agreement

- Any FTA will be much inferior to the EU Single Market, involve extra large admin costs
- Significant restrictions on trade will come into play in a FTA– new customs procedures, compliance with onerous rules of origin requirements, more regulations etc
- Documentary evidence needed for customs clearance, proof all product made in country, compliance with regulatory standards/rules – non-tariff barriers are big costs
- Trade in agri-food products may require export health certs and could be subject to veterinary border inspections – both exports and imports
- While FTA should allow for continuing tariff-free and quota-free trade in most goods, such agreements generally do not extend to services or, indeed, fishing rights
- EU-Canadian FTA left some tariffs & quotas in place, but included some services
- A big issue is financial services – EU likely to be very wary of giving UK permanent equivalence/passporting rights. Any other equivalence regime can be altered or terminated
- No right of redress for companies via courts under FTA, unlike in the EU Single Market

# Exporters and Importers will be impacted by FTA

- UK outside EU Customs Union after transition period ends so both exports and imports will need paperwork, even if tariff free trade is agreed under FTA that implies no Customs Duties
- Need to get Customs Registration Numbers in both Ireland (EORI) and the UK from Revenue
- Customs Declaration forms to accompany all goods – may need a Customs Clearance Agent
- Deferred Payment Bank Account may be required by Revenue to cover any Duties/VAT
- Trade in some agri-food products likely to require additional veterinary checks and certs
- Compliance with onerous rules of origin may be required for some goods
- The UK suppliers and customers of businesses will also need to have new paperwork in place
- Land bridge route via Great Britain to mainland Europe will also be impacted
- Need transit documentation and possibly sealed containers, with delays likely at ports
- Additional working capital may be needed if cash flow impacted by trade frictions

# Vulnerable food sector as very dependent on UK market

- Food and Beverages account for 25% of Irish exports to UK
- Around 40% of Irish food exports go to the UK – key market for beef and cheese
- Main EU tariffs relate to food products, keeping prices high. UK may do new trade deals to cut tariffs on food imports
- Other sectors very dependent on UK market include machinery and transport, metal products, textiles
- Even with FTA, there will be new admin trading costs for those exporting & importing with UK –customs clearance docs, rules of origin etc

Share of Exports by Industry Destined for the UK (ESRI)

# FTA expected to lower growth rate of Irish economy

- **Multiple hits to the Irish economy if there is a no EU-UK Trade deal** at end of transition period: further sharp fall in sterling, likely recession in UK, disruption to trade/supply lines, tariffs, new administration and regulatory costs etc
  - Sharp fall-off in trade with UK likely if there is no trade deal, with the **shock front loaded** - around half of the impact on trade would take place in the first two years, per ESRI
  - Central Bank estimate GDP would be 5% lower if the UK moves to WTO rules at end of transition period. ESRI also put impact of no-deal hard Brexit at circa 5%
  - Economy would be impacted over time by **UK move to FTA** as this would result in new significant non-tariff barriers, imposing costs and making trade more difficult with UK
  - **Central Bank estimate Irish GDP would be 3.5% lower in long term under a FTA**
- **Copenhagen Economics** have examined various Brexit scenarios
  - Estimate impact by 2030 is to **reduce Irish GDP** by 2.8% under a EEA scenario, **by 4.3% in a standard FTA, but 3.5% in enhanced FTA** with closer regulatory alignment
  - CE estimate GDP would be 7% lower in a WTO (no trade deal) scenario

# AIB Brexit Sentiment Index

- A total of **700 SME's (with up to 250 employees)** across the island of Ireland

Source: Ipsos MRBI

\*The Index reflects and measures the sentiment of Irish SMEs in the Republic of Ireland and Northern Ireland towards Brexit, summarised as a single number, with a potential range from +100 to -100. It takes the difference between the positive and negative responses across four key measures: Impact on business now, Impact on future business (next 5 years), Level of visibility and, finally, the Wider economic impact of Brexit.

- Headline index **weak again** in Q3. One of the most notable features of the surveys in 2019 was the number of firms that said Brexit having a **negative impact on their business**
- **Manufacturing, Food & Drink, Transport, Tourism and Retail sectors most concerned** about Brexit
- **50% of ROI and 66% of NI firms** who had investment plans said they have been **cancelled or postponed** owing to Brexit.

# Good Irish growth can continue if external risks avoided

- Irish economy should continue to grow at impressive pace, but not as strongly as in recent years
- House building picking up from still low output levels
- Public spending on the rise
- Activity supported by low interest rate environment
- Strong growth in household incomes
- Continuing good inflows of FDI
- Irish inflation still very low
- However, Brexit remains real challenge for economy
- Important too that global economy avoids recession
- GDP growth forecast at 4% in 2020 & 3% in 2021, assuming EU-UK trade deal & no global recession
- ESRI had estimated medium-term growth rate of economy at around 3.25% for the period 2020-2025. Will now be lower, with UK out of EU

# AIB Irish Economic Forecasts

<i>% change in real terms unless stated</i>	2017	2018	2019 (e)	2020 (f)	2021 (f)
<b>GDP</b>	<b>8.1</b>	<b>8.2</b>	<b>5.5</b>	<b>4.0</b>	<b>3.0</b>
<b>GNP</b>	5.1	6.5	3.0	3.7	2.75
<b>Personal Consumption</b>	3.0	3.4	3.5	3.0	2.5
<b>Government Spending</b>	3.9	4.4	4.0	3.0	3.0
<b>Fixed Investment</b>	-6.6	-21.1	48.0	5.0	5.0
<b>Core Fixed Investment*</b>	4.0	13.0	2.0	5.0	5.0

\*Excludes investment in aircraft and intangibles

Source: CSO, D/Finance; AIB ERU Forecasts

# Risks to the Irish economy

- Main risks to the Irish economy are external
- Brexit still a big concern for Ireland given uncertainty about future EU-UK trading relationship
- Weaker external environment, with downside risks to global growth from the coronavirus, protectionism/tariffs, weak world trade/manufacturing activity, sluggish European economy
- Questions around Ireland's corporation tax regime (Apple ruling, moves on tax harmonisation in EU, OECD tax reform/minimum tax rate proposals) could impact FDI
- Supply constraints in new house building activity, which is recovering at a slow pace with output still at low levels
- Competitiveness issues - high Dublin house prices, high rents, high personal taxes, rising wages
- Credit constraints – tightening of lending rules, on-going deleveraging, weak credit demand
